

The Challenge

In light of what we learned from the COVID-19 pandemic, design a system that addresses and improves the logistics of providing care and treatment for a mass number of people with your local hospital as the central point of operation.

Context

The Covid-19 epidemic response has shown that the U.S. is blessed with excellent health care providers, researchers, and facilities. But it has also shown that our national health care system was unprepared for the surge of Covid patients. We believe the health care system will benefit from your innovation regarding our most recent crisis in preparation for our next health crisis.

Road Map Questions

1. Why did you choose this Challenge?
2. Are there any competitors or ideas similar to your solution?
3. Who would you partner with that is already doing healthcare at a national level? Why?
4. What don't adults understand about how your generation sees this challenge?
5. Describe your solution or innovation.
6. How much would it cost to build or implement your solution?
7. How would you market your solution?
8. How would you explain your concept to people 30 years old or more who are used to the old way of healthcare?
9. Create a +/-60 second video pitching your solution. Upload your video here:
